ASMAG - October 2020

### STid Mobile ID®

STid Mobile ID moves access cards onto smartphones where they can be used alongside or instead of traditional RFID cards. Mobile ID receives and saves an unlimited number of virtual access cards on your mobile phone.

Mobile ID offers 5 different identification modes to choose from, badge mode, slide mode, tap tap mode, remote mode, hands free mode, making Mobile ID intuitive and easy to use. Encryption and obfuscation methods are applied to securely protect data privacy. The intuitive identification modes combined with encryption and obfuscation methods make Mobile ID ideal for healthcare, critical infrastructure sites and education facilities.
