# STid revolutionizes access control with Architect, its new range of upgradeable readers

NEWS LEGIC

STid revolutionizes access control with Architect®, its new range of upgradeable readers

STid has built itself a reputation as the leading high security solution developer by becoming the first RFID products manufacturer to receive First Level Security Certification (CSPN).

It is in this spirit of innovation that STid is proud to offer an exclusive presentation of Architect®, the first modular range of secure readers with LEGIC 4000 series for all your access control applications that bring together upgradeability and user-friendliness.

By optimizing the design, we have developed a RFID core that can be easily connected to a set of additional smart modules: a keyboard, biometrics or a touch screen.

For more security, the innovative tamper protection system protects sensitive data and gives the possibility to delete the authentication keys.

STid offers a wide range of customization options to tailor the reader to your corporate image and integrate it fully in its installation environment.
